CATALYTIC ACTIVITY: CTP + 2-C-methyl-D-erythritol 4-phosphate = diphosphate + 4-(cytidine 5'-diphosphat)-2-C-methyl-D-erythritol.
PATHWAY: Nonmevalonate tergenoid biosynthesis pathway; third stepsingly: BELONGS TO THE ISPD FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gas
                                                                                                                                                                                                                                                                                                                                                                                 PHOSPHATE (BY SIMILARITY).

CATALITIC ACTIVITY: CTP + 2-C-methyl-D-erythritol 4-phosphate = diphosphate + 4-(cytidine 5'-diphospho)-2-C-methyl-D-erythritol.

PATHWAY: Nonmevalonate terpenoid biosynthesis pathway; third step.

SIMILARITY: BELONGS TO THE ISPD FAMILY.
                                                                                                                                                                                                                                                                                                           European Bioinformatics Institute.

"Complete genome sequence of enterohemorrhagic Escherichia coli 0157:17 and genomic comparison with a laboratory strain K-12.";

DNA Res. 8:11-22(2001).

-I- FUNCTION: Catalyzes the formation of 4-diphosphocytidyl-2C-methyl-Derythritol 4-phosphate.

-I- CATALYTIC ACTIVITY: CTP + 2-C-methyl-D-erythritol 4-phosphate diphosphate + 4-(cytidine 5'-diphospho)-2-C-methyl-D-erythritol.

-I- COFACTOR: Magnesium, manganese or cobalt (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ECOS7

hillo A.M., Cane D.E., Noel J.P.;

Structure of 4-diphosphocytidyl-2-C-methylerythritol synthetase
involved in mevalonate-independent isoprenoid biosynthesis.";

Mat. Struct. Biol. 8:641-648(2001).

Mat. Struct. Biol. 8:641-648(2001).

Mat. Struct. Biol. 8:647-648(2001).

MAT. STRUCTION: CARALYZES THE FORMATION OF 4-DIPHOSPHOCYTIDYL-2C-METHYL-

D-ERYTHRITOL FROM CTP AND 2C-METHYL-D-ERYTHRITOL 4-PHOSPHATE.

MAT. STRUCTLY ACTIVITY: CTP + 2-C-methyl-D-erythritol 4-phosphate =

diphosphate + 4-(cytidine 5'-diphospho)-2-C-methyl-D-erythritol.

MANGANESE OR COBALT.

COPACTOR: MAGNESIUM, MANGANESE OR COBALT.

COPACTOR: Nonmevalonate terpenoid biosynthesis pathway; third step.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Bacteriol. 185:2330-2337(2003).

PINCTION: Catalyzes the formation of 4-diphosphocytidyl-2C-methyl-D-crythritol from CTP and 2C-methyl-D-crythritol 4-phosphate (By similarity).

CATALYTIC ACTIVITY: CTP + 2-C-methyl-D-crythritol 4-phosphate = CATALYTIC ACTIVITY: CTP + 2-C-methyl-D-crythritol 4-phosphate = diphosphate + 4-(cytidine 5'-diphospho)-2-C-methyl-D-crythritol.

PATHWAY: Nonmevalomate terpenoid biosynthesis pathway; third step-similarity: BELONGS TO THE ISPD FAMILY.

FUNCTION: CATALYZES THE FORMATION OF 4-DIPHOSPHOCYTIDYL-2C-
METHYL-D-ERYTHRITOL FROM CTP AND 2C-METHYL-D-ERYTHRITOL 4-
PHOSPHATE (BY SIMILARITY).

CATALYTIC ACTIVITY: CTP + 2-C-methyl-D-erythritol 4-phosphate = 4-(cytidine 5'-diphosphol-2-C-methyl-D-erythritol.

PATHWAY: Nonmevalonate terpenoid biosynthesis pathway; third stel.

PATHWAY: Nonmevalonate terpenoid biosynthesis pathway; third stel.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               129

METHYL-D-ERVITHRIFOL FROM CIP AND 2C-METHYL-D-ERVITHRIFOL 4-
PHOSPHATE (BY SIMILARITY).
CATALYTIC ACTIVITY: CTP + 2-C-methyl-D-erythritol 4-phosphate =
diphosphate + 4-(Gytidine 5'-diphospho)-2-C-methyl-D-erythritol.
PATHMAY: Nonmevalonate terpenoid blosynthesis pathway; third step
SIMILARITY: BELONGS TO THE ISPD FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             FUNCTION: Catalyzes the formation of 4-diphosphocytidyl-2C-methyl-D-erythritol from CTP and 2C-methyl-D-erythritol 4-phosphate (By similarity).

CATALYTIC ACTIVITY: CTP + 2-C-methyl-D-erythritol 4-phosphate = diphosphate + 4-(cytidine 5'-diphospha)-2-C-methyl-D-erythritol.

PATHMAY: Nonmevalonate terpenoid biosynthesis pathway; third step. SIMILARITY: BELONGS TO THE ISPD FAMILY.
